"PARP-2, a novel mammalian DNA damage-dependent poly(ADF-ribose)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Masuho Y., Kanehori K.;
"NEDO human cDNA sequencing project.";
Submitted (FEB-2000) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: HAS DNA-DEPENDENT POLY[ADP-RIBOSE] POLYMERASE ACTIVITY.
SEEMS TO PLAY A ROLE IN THE RESPONSE TO DNA DAWAGE (By similarity).
-I- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor = nicotinamide + {ADP-D-ribosyl}(N+1)-acceptor.
                                                                                                                                                                                                                                                                                             PPOZ_HUMAN STANDARD; PRT; 583 AA.

-!- FUNCTION: HAS DNA-DEPENDENT POLY (ADP-RIBOSE) POLYMERASE ACTIVITY.

SEEMS TO PLAY A ROLE IN THE RESPONSE TO DNA DAMAGE.

-!- CATALYTIC ACTIVITY: NAD(+) + (ADP-D-ribosyl)(N)-acceptor = nicotinamide + (ADP-D-ribosyl)(N+1)-acceptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -i- SUBCELLULAR LOCATION: Nuclear.
-i- TISSUB SPECIFICITY: Widely expressed; the highest levels were in testis followed by ovary.
-i- INDUCTION: By high levels of DNA-damaging agents.
-i- SIMILARITY: BELONGS TO THE PARP FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ~
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ame J.-C., Rolli V., Schreiber V., Niedergang C., Apiou F., Decker Muller S., Hoger T., Menissier-de Murcia J., de Murcia G.M.; "PARP-2, A novel mammalian DNA damage-dependent poly(ADP-ribose)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "A bidirectional promoter connects the poly(ADP-ribose) polymerase (PARP-2) gene to the gene for RNase P RNA.";

SUBCELLULAR LOCATION: Nuclear.
MISCELLULAR LOCATION: Nuclear.
MISCELLULAR LOCATION: Nuclear.
MISCELLANEOUS: THE ADP-D-RIBOSYL GROUP OF NAD(+) IS TRANSFERRED TO
FURTHER ADP-RIBOSYL GROUP ON A HISTONE OR THE ENZYME ITSELF, AND
FURTHER ADP-RIBOSYL GROUPS ARE TRANSFERRED TO THE 2'-POSITION OF
THE TERMINAL ADENOSYLE MOIETY, BUILDING UP A POLYMER WITH AN
AVERAGE CHAIN LENGTH OF 20-30 UNITS.
SIMILARITY: BELONGS TO THE PARP FAMILY.
SIMILARITY: CONTAINS 1 BRCT DOMAIN.
similarity).
crafilarity).
crafilarity).
crafilarity).
crafilarite AcTIVITY: NAD(+) + {ADP-D-ribosyl}(N+1)-acceptor.

-i- SUBCELLULAR LOCATION: NUCLEAT.

-i- SUBCELLULAR LOCATION: NUCLEAT.

-i- MISCELLANEOUS: THE ADP-D-RIBOSYL GROUP OF NAD(+) IS TRANSFERRED TO AN ACCEPTOR CARBOXYL GROUP ON A HISTONE OR THE ENZYME ITSELF, AND FURTHER ADP-RIBOSYL GROUPS ARE TRANSFERRED TO THE 2'-POSITION OF THE TERMINAL ADENOSINE MOLETY, BUILDING UP A POLYMER WITH AN AVERAGE CHAIN LENGTH OF 20-30 UNITS.

-i- SIMILARITY: BELONGS TO THE PARP FAMILY.

-i- SIMILARITY: CONTAINS 1 BRCT DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29; Gaps

It is produced through a collaboration
                   CELLULAR PROCESSES SUCH AS DIFFERENTIATION, PROLIFERATION, AND TUMOR TRANSFORMATION AND ALSO IN THE REGULATION OF THE MOLECULAR EVENTS INVOLVED IN THE RECOVERY OF CELL FROM DNA DAMAGE.

-!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-TIDOSY1}(N)-acceptor -
nicotinamide + {ADP-D-TIDOSY1}(N+1)-acceptor -
-- COFACTOR: ZITC, CONTAINS TWO MOLES OF ZINC PER MOLE OF PROTEIN.
-!- SUBGNIT: HOMODIMER (POTENTIAL).
-!- SUBGNIT: HOMODIMER (POTENTIAL).
-!- SUBGNIT: ADP-D-RIBOSYL GROUP OF NAD(+) IS TRANSFERED TO AN ACCEPTOR CARBOXYL GROUP OR A HISTONE OR THE ENZYME ITSELF, AND FURTHER ADP-RIBOSYL GROUPS RE TRANSFERRED TO THE 2'-POSITION OF THE TERMINAL ADENOSINE MOLETY, BUILDING UP A POLYMER WITH AN AVERAGE CHARIN DEVOIT OF 20-30 UNITS.
-!- SIMILARITY: BELONGS TO THE PARP FAMILY.
-!- SIMILARITY: CONTAINS 1 BRCT DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transferase; Glycosyltransferase; NAD; DNA-binding; Nuclear protein; ADP-ribosylation; Zinc-finger; Zinc.

PROTEINS BY POLY(ADP-RIBOSYL)ATION. THE MODIFICATION IS DEPENDENT
CON DNA AND IS INVOLVED IN THE REGULATION OF VARIOUS IMPORTANT
CELLULAR PROCESSES SUCH AS DIFFERENTIATION, PROLIFERATION, AND
TUMOR TRANSFORMATION AND ALSO IN THE REGULATION OF THE MOLECULAR
CONTINUED IN THE RECOVERY OF CELL FROM DNA DAMAGE.

COTANTITIC ACTIVITY: NAD(+) + {ADP-D-TIDOSY]/(N)-ecceptor -
ILCOTIONAING + {ADP-D-TIDOSY]/(N)-ecceptor -
COFACTOR: ZINC, CONTAINS TWO MOLES OF ZINC PER MOLE OF PROTEIN.
COTACTOR: MICHORY.
COFACTOR: THE ADP-D-TIDOSY]/(N)-acceptor -
COFACTOR: THE CATAINS TWO MOLES OF ZINC PER MOLE OF PROTEIN.
COTACLIANCE OF THE DEPLOY OF NAD(+) IS TRANSFERRED TO
AN ACCEPTOR CARBOXYL GROUP ON A HISTONE OF THE ENZYME ITSELF, AND
FURTHER ADP-RIBOSYL GROUP ON A HISTONE OF THE ENZYME ITSELF, AND
FURTHER ADP-RIBOSYL GROUP ON A HISTONE OF THE 2'-POSITION OF
COTACL OF THE TERMINAL ADENOSINE MOLETY, BULLDING UP A POLYMER WITH AN
AVERAGE CHAIN LENGTH OF 20-30 UNITS.
COTACL OF THE TRANSFERRED TO THE 2'-DOSITION OF
COTACL OF THE TRANSFERRED TO THE 2'

Submitted (MAY-1999) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor -
-!- CATALYTIC ACTIVITY: NAD(+) + {ADP-D-ribosyl}(N)-acceptor -
-!- TISSUE SPECIFICITY: Widely expressed; the highest levels are in the kidney, skeletal muscle, liver, heart and spleen; also detected in pancreas, lung, placenta, brain, leukocytes, colon, small intestine, ovary, testis, prostate and thymus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15 EKKKGRQAG-----REEDPFRSTAEALKAIPAEKRIIRVDPTCPLSSNPGTQVY----E 64

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                           This invention describes novel human and murine poly(ADP-ribose)
polymerase (PARP) homologues, which are characterised by an amino acid
sequence with a functional NAD^+-binding site and no zinc finger
sequence moitf, of general formula CX_2CX_ZMHX_ZC (I). The nucleic acid
sequences, PARP homologues and antibodies are useful for analytic
detection of PARP homologues and for identifying PARP effectors or
binding partners, as well as for determining their effectiveness.
PARP-binding partners are useful for the diagnosis or therapy of a
disease condition, which may comprise tissue damage from cell death
centry deficiency, which may comprise tissue damage from cell death
following necrosis or apoptosis. The disease condition may be chosen
from a neurodegenerative illness, or sepsis or ischemic tissue damage,
in particular neurotoxic disturbances, etc. This sequence represents the
human PARP3 protein used in the method of the invention.
                                                                                                                                                                                                                                                                                          ö
